I like solving problems at the system level—building things that connect, scale, and just work.

EXPERIENCE

Fullstack Developer, Sphere Travelmedia and Exhibitions 04/2026 – Present | Bengaluru
- Rebuilt the company website and backend using Laravel, improving performance, maintainability, and scalability.
- Improved UI/UX with cleaner layouts, navigation, and consistent branding.
- Built email and badge generation workflows based on user category and check-in checkpoints (travel/hospitality segmentation).
- Developed internal tools like OCR card scanner and badge printing system for event operations.
- Integrated Ollama local AI workflows to automate internal processes.
- Built mass mailing system and workflows for lead conversion, exhibitor onboarding, and payment processing.

Jr. Data Analyst, Sphere Travelmedia and Exhibitions 04/2025 – 04/2026 | Bengaluru
- Built data collection tools and used different platforms to gather and organize new data.
- Designed a centralized SQL database for storing and managing business data.
- Organized and migrated Excel data into structured SQL tables.
- Developed and implemented the badge printing system used for exhibition registrations and attendee management.
- Managed on-ground operations for registrations, exhibitor badge printing, badge distribution, and volunteer coordination during events.

Event Executive, Sphere Travelmedia and Exhibitions 12/2023 – 04/2025 | Bengaluru
- Managed attendee and exhibitor data updates, contributing to registration and event management workflows.
· Coordinated large-scale communication campaigns for exhibitions and roadshows through email and phone outreach.
· Worked closely with hosted buyers, exhibitors, and association partners to streamline participation and registration processes.
· Supported exhibition registration operations, providing insights that later informed the development of automated badge-printing and attendee management systems.

PROJECTS

AI-Powered RAG-Based Knowledge System (Laravel, MySQL, LLM Integration)
- Designed and built a Retrieval-Augmented Generation system for automated FAQ and knowledge retrieval
- Developed API-driven architecture using Laravel for AI response workflows
- Structured database layer for efficient knowledge storage and retrieval
- Implemented automated FAQ update pipeline for dynamic content updates
- Integrated LLM-based response generation for contextual answers

Local AI Code Generation Agent (PHP, Ollama, cURL, LLM Automation)
- Built an autonomous AI agent that generates complete PHP applications from natural language prompts
- Integrated local LLM (Ollama – qwen2.5:14b) for offline code generation workflows
- Automated project scaffolding with dynamic folder creation and file writing
- Engineered prompt system to enforce raw executable code output without formatting artifacts
- Implemented secure filesystem handling and API reliability controls

PySwiss - Python Code Runner Environment
- Offline Python code runner and automation environment.
- Preloaded automation scripts with support for writing and saving custom scripts.
- Built-in tools for FTP/QR-based file transfer, file organization, and image compression.
- Productivity-focused workflow with reusable automation utilities and planned Ollama-based local AI integration.

Real-Time Gesture Control System (Python, MediaPipe, Flask, PyAutoGUI)
- Built a real-time hand gesture recognition system for OS-level control using camera input
- Designed modular gesture-to-key mapping system for keyboard automation (navigation, modifiers, shortcuts)
- Implemented temporal stability filtering using history buffers to reduce false gesture triggers
- Developed hold-state key handling (e.g., ALT hold mode) and system toggle functionality
- Optimized low-latency execution loop for real-time responsiveness

Scale Identifier – Real-time Pitch Detection & Visualizer
- Developed a real-time audio analysis system that detects vocal pitch using auto-correlation and maps it to 12 swarasthanas. Built a dynamic visual interface that highlights detected notes and displays frequency alignment in real time using a radial “spider web” visualization.
- Implemented microphone input processing, frequency detection, and cent-based accuracy matching for precise note identification.

SKILLS

Languages — Python | SQL | PHP | JavaScript | MQL5

Frameworks & Backend — Laravel | Django | Express.js | REST APIs

Databases — MySQL | MongoDB

Version Control — Git

DevOps & Deployment — Docker | Linux Servers | cPanel

AI & Automation — Ollama, LLM Workflows, RAG Systems, AI Agents

EDUCATION

B-Tech in Electronics Engineering,
Raajdhani Engineering College
2018 – 2022 | Bhuwaneshwar, Odisha

Diploma in Electrical Engineering,
Koustuv School of Engineering
2015 – 2018 | Bhuwaneshwar, Odisha

COURSES

Python DSA, Udemy
01/2026 – 04/2026
- OOPs ,Linked Lists, Stacks, Queues, Dynamic Programming,

Data Analyst, IBM
03/2023 – 06/2023
- SQL, Python, Excel, IBM Cognos

Python For Trading, QuantInsti®
04/2023 – 04/2023
